

Compliant machine safety signs

Achieve higher levels of machine safety

www.bradyeurope.com/machinesafety

Optimally warn and inform users about machine safety risks that cannot be removed through machine design with our reliable, high definition machine safety signs.

Fully compliant

Our Machine Safety Sign offer is compliant with the internationally recognised ISO 3864-2:2016 norm. Compliance with the norm enables maximum recognisability and helps machine users to better understand any warning, caution or mandatory PPE requirements. The entire range of machine safety signs is also offered on UL-approved materials.

Highly visible

The signs can be applied to any surface where they are most visible and best placed to support machine safety. Their high resolution print further attracts attention with bright colours and sharp, high definition safety messaging. They are printed on our reliable, industrial grade sign materials that can resist challenging conditions and remain attached and legible for many years.

Customise

Our machine safety signs are highly customisable to suit a variety of needs and machine usage contexts. Options include sign size, shape and adhesive to optimally fit any machine or part. Sign materials can be changed to determine in- or outdoor sign reliability in specific environments. And any prints are fully customisable to optimally impact machine safety.

Machine safety signs help reduce safety risks

1. Eliminate safety risks through machine design

2. Substitute machine safety risks

3. Contain machine safety risks

4. Inform about machine safety risks

5. Train users to deal with machine safety risks

6. Protect users against machine safety risks

ISO 3864-2 compliant visuals

Compliant visuals include 1 out of 3 signal words and at least one ISO 7010 safety sign.

Caution

Signal word to indicate a hazardous situation that, if not avoided, could result in minor or moderate injury.

Warning

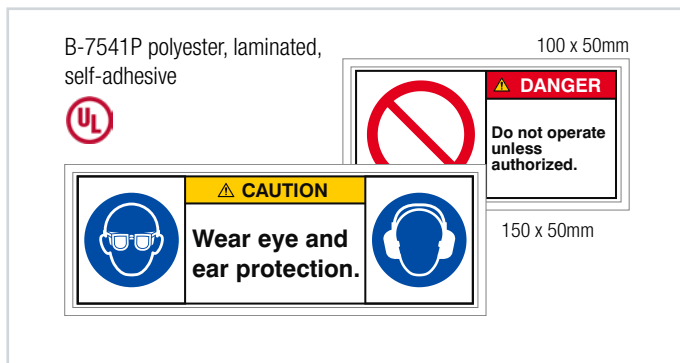

Signal word to indicate a hazardous situation that, if not avoided, could result in death or serious injury.

DANGER

Signal word to indicate a hazardous situation that, if not avoided, will result in death or serious injury. Limited to extreme situations.

Standard machine safety signs (Compliant to ISO 3864-2:206)

Adhesive

Non Adhesive
