

# Easily identify wet or condensed surfaces

## B-7530 and B-7532 preprinted identification material

Wet and condensed surfaces are notoriously difficult to label in a reliable way. Labels tend to get saturated and fall off quickly. B-7530 and B-7532 however stay attached and remain legible. They are polyester labels that offer excellent adhesion to wet and condensed metal surfaces.

- fully customisable identification materials available as signs and pipe markers
- maximise workplace safety with a reliable marker for wet and condensed surfaces
- can be applied to condensed surfaces, no need to shut down production processes
- stays attached even on temperature cycling pipes
- offers long indoor (B-7530) and outdoor (B-7532) reliability
