### Ever lost time figuring out where each wire goes?

Durable professional labels that remain legible and stay attached in harsh conditions are extremely important to keep power, network, voice and data cables and components organised and running effectively.

### Professional identification on wires, cables and components enables you to:

- immediately recognise what needs checking during troubleshooting
- clearly mark parts for upcoming maintenance upgrades
- trace history, lifespan and supplier
- add safety warnings or precautions

Ask yourself how much time or money you lose while trying to trace an unidentified faulty cable, wire or component.

Ask yourself how fast pressure builds when machinery, production lines, servers and services are impacted.

### This is when professional labelling pays off big time.

## The combination of label liner, adhesive, substrate and topcoat provide a professional label's features, resistances, capabilities and durability.

- 1 The topcoat gives the label its colour and finish, receives the print, and increases resistance against weathering, flames, chemicals or heat.
- 2 The substrate gives the label its form and provides tensile properties such as strength and flexibility and physical properties such as chemical and temperature resistance.
- 3 The adhesive attaches the label to a chosen surface type and ensures resistance against a set of environmental contexts.
- 4 The label liner is a very thin carrier that releases the self-adhesive label.

### Which label suits your needs best?

Request your Electrical, Tele- & Datacom Identification guide book to help you choose the optimal Brady label material for your application at:

We continuously try to improve & extend our label material offering, therefore make sure to check for firmware upgrades regularly, in order to make sure you always have access to the newest materials.

Order references beginning with "B" indicate bulk rolls. \*Order references ending with "AW" indicate all white labels with no clear area.

The BMP71 printer works with a different set of dedicated ribbons. For more information, visit [www.bradyeurope.com/BMP71](http://www.bradyeurope.com/BMP71)

Apply the printed area to your wire.

Wrap the clear area around the wire, covering the printed area.

Once applied the clear laminate will protect your legend for years to come.

Order references beginning with "B" indicate bulk rolls. \*Order references ending with "AW" indicate all white labels with no clear area.

The BMP71 printer works with a different set of dedicated ribbons. For more information, visit [www.bradyeurope.com/BMP71](http://www.bradyeurope.com/BMP71)

## Wire & cable marking

### Wrap around labels

- These durable cloth wrap around labels are available with either an adhesive that allows the markers to be removed cleanly and reapplied if necessary (B-498) or with a permanent adhesive (B-437, B-499).
- A 3 mm overlap is recommended with these materials for an ideal, long lasting solution.

## Wire & cable marking

### LAMINAT cable marking carriers

- LAMINAT carriers come with a strip to laminate text labels.
- Carriers are fixed with two cable ties on the cables and wires for permanent identification.
- The LAMINAT carriers can be used for any type of cable identification where permanency of the legend is crucial.

Pull the protective film backwards.

Place the label in the middle leaving space for sealing on all four sides of the label.

Seal the carrier by placing a finger on the film and pushing forward, thus rolling over the film and rolling off the silicon liner.

Always feed the cable ties from the top, thus bending down the LAMINAT carrier along the cable.

## Asset & component marking

### PermaShield Labels

- These labels come with a separate overlamine to be applied over the printed label.
- The label remains clear and easy-to-read, even in very harsh environments.
- The overlamine extends outside of the label on each side when applied.

\*\*Average expected outdoor life of product will depend on user definition of failure, climatic conditions, mounting techniques and material colour. The up to 8 to 10 year outdoor durability applies to the vinyl label stock only; ribbon durability will vary. A polyester overlaminates is recommended for harsh environments - long term exposure to wind and rain. >>>

### Reflective tapes

- The reflective quality of this material makes it ideal for reading labels in low light conditions (with flashlights).

## Component marking

### Security identification labels

- Tamper-resistant tape destructs into tiny fragments when being removed, makes any attempts to remove the label very difficult and time consuming.

### Vial / tube labels

- Brady's vial and test tube labels are designed to withstand extreme laboratory solvents like Xylene, Ethanol, Alcohol and DMSO, ensuring that the specimen identification is always legible - and will not smear, fade or fall off.

The background colours in the Order Reference column represent the material colour.

Labels are shown per vial / tube size and in order of label width.

## Specimen tracking identification

### Conical / large tube labels

- Brady offers several sample identification labels which are perfect to identify conicals. They are easy to handle, have great flexibility and easily wrap around curved sample containers. Your sample identification label will remain attached and legible, even when the sample is stored in a freezer, in liquid nitrogen or heated in an autoclave.

## Centrifuge / microcentrifuge labels

- Brady offers a wide range of Centrifuge, Eppendorf and PCR Labels. When applying a self-laminating label, we recommend you avoid touching the adhesive side of the label when wrapping it around a vial or tube, to ensure maximum adhesion.

The background colours in the Order Reference column represent the material colour.

Labels are shown per vial / tube size and in order of label width.

### Slide labels

- Brady offers labels specifically designed to identify slides and to resist exposure to harsh chemicals during the slide staining process. They perform well in the hematoxylin and eosin slide staining process and offer superior chemical resistance also useful in other laboratory contexts.

Labels are shown in order of label width.

## Specimen storage identification

### Cryo tubes & vials

- Brady offers a range of labels designed specifically to identify laboratory samples for cryo storage. These labels can be applied to room temperature or to already frozen samples, albeit with a small overlap. The label will remain legible and will stick to the sample container during processing, even when exposed to extreme heat or chemicals like DMSO, Xylene and Ethanol, ensuring secure sample identification in the most challenging laboratory conditions.

Labels are shown per vial / tube size and in order of label width.

The background colours in the Order Reference column represent the material colour.

## Specimen storage identification

### Well plate labels

- When total tracking of all sample collections is required then Brady has a solution for Well plate identification. Our well plate labels guarantee crystal clear text and barcoding for most lab environments.

- F** Freezer environment
- N** Liquid nitrogen environment
- A** Autoclave environment
- H** Hot water bath (100°C)
- S** Self-laminating label
- L** Low-profile label (extremely thin)
- R** Removable

Labels are shown in order of label width.

The background colours in the Order Reference column represent the material colour.

## Lean lab identification

- F** Freezer environment
- N** Liquid nitrogen environment
- A** Autoclave environment
- H** Hot water bath (100°C)
- S** Self-laminating label
- L** Low-profile label (extremely thin)
- R** Removable

## Bottles / flasks & dishes

- Brady's labels for bottles, flasks and dishes are easy to handle and flexible. This enables the labels to be placed on curved containers and remain attached and legible, even after being subjected to freezing, liquid nitrogen and heat.

Labels are shown in order of label width.

The background colours in the Order Reference column represent the material colour.

### Water dissolvable labels

The B-403 water dissolvable paper label is self-adhesive and extremely easy to apply. Exposing the label to warm water will completely dissolve it within 30 seconds, without damage to the surface it was applied to, and without leaving any residue. The water dissolvable label adheres well to most surfaces, including glass, stainless steel, aluminium, plastic and others. This makes the label a great solution to enable short term identification for containers, crates and glassware with a minimum of waste.
