Are You Sure You Inspected It?

The Benefits of Inspection Management Software Using Barcode Technology

Barcode data collection software for workplace safety inspections provides enormous benefits for companies who perform compliance-based and routine inspections. With a barcode data collection solution in hand, capturing data is faster and more accurate. In addition to increasing accuracy, costs are lowered, productivity is increased and you are finally able to eliminate burdensome paperwork.

Benefits of using barcode technology for workplace safety and compliance inspections include:

- **Increased productivity:** A barcode scanner cantypically record data five to seven times fasterthan manually documenting information.

- **Mitigates risk and liability:** Inspections are ontime ensuring that inspections are in compliancewith regulatory guidelines.

- **Elimination of paperwork:** There's nothing to file, misplace or store.

- **Ensures data integrity:** Statistically the averagetypist will make one in 300 keystroke errors. Incomparison, a barcode will misread once in threemillion reads.

- **Increased equipment life:** Any failedinspections are clearly identified allowing for quick resolution.

- **Provides an audit trail:** Ideal for equipment warranty tracking.

- **Faster access to information:** Detailed reports quickly provide all inspection information.

- **Accurate, certifiable inspections:** Allinspection activities are time and datestamped, providing proof of service.
