

Print your own lockout procedures in full colour

Lockout/Tagout procedures can save lives during maintenance by offering complete and precise steps on how to isolate machines from their energy supply. For optimal compliance, these procedures should be attached to the relevant machinery. A practical way to do this, is designing the procedure in the Lockout Writer app from Brady Workstation and print it with the BradyJet J5000 Label Printer in full colour on durable materials.

Article No.	Order Reference	Product Description
