code

Code Reader 2500™
Manual Version 3
Release Date: 1/22/2009

Statement of Agency Compliance

The Code Reader 2500 has been tested for compliance with FCC regulations and was found to be compliant with all applicable FCC Rules and Regulations.

IMPORTANT NOTE: To comply with FCC RF exposure compliance requirements, this device must not be co-located or operate in conjunction with any other antenna or transmitter.

CAUTION: Changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

The Code Reader 2500 has been tested for compliance to CE standards and guidelines and was found to conform to applicable CE standards, specifically the EMC requirements EN 55024, ESD EN 61000-4-2, Radiated RF Immunity EN 61000-4-3, ENV 50204, EFT EN 61000-4-4, Conducted RF Immunity EN 61000-4-6, EN 55022, Class B Radiated Emissions, and Class B Conducted Emissions.

Code voids product warranty if the hard case has been opened or tampered with in any way.

In addition, a CB Test Certificate has been issued by the National Certification Board (NCB) indicating CR2500 meets all safety and quality standards in accordance to IEC 60950-1:2001, First Edition.

Code Reader 2500 User Manual

Table of Contents

Chapter 1 - Getting Started

1.1 - Introduction

With new high-performance bar code reading technology the Code Reader 2500 (CR2500) is the most advanced mobile bar code reader on the market today. The CR2500 decodes bar codes faster and offers features not found in other readers, including new automatic glare reducing illumination technology. The result is unequaled performance, even on difficult reading surfaces, including circuit boards, IV bags, patient-wristbands, driver licenses and other shiny or curved surfaces.

The CR2500 also offers the next generation in dual-field optics and is the only bar code reader that can read both wide linear and the smallest of 2D bar codes. The optimal focus and field of view indicator of the CR2500 make bar code reading even easier than before.

The CR2500 can be deployed in low and high-volume use-case scenarios and will excel in batch, cabled or Bluetooth wireless modes. Built on an open JavaScript platform, the CR2500 can be easily customized to meet the data manipulation needs of any end-user application. All scanned data configuration settings and JavaScripts files are stored in non-volatile flash memory and are maintained in the event of a power loss.

Enabled for both in-stand and out-of-stand operation the CR2500 can be used as a wireless hand-held and fixed presentation reader. This lightweight, comfortable and easy to use bar code reader solution can be further accessorized to fit the needs of applications in the healthcare, public safety, manufacturing, aerospace, industrial automotive and defense environment. With its modular design and JavaScript platform, the CR2500 is future-proof and the most cost-effective reader available.

Representing the embodiment of Code's years of experience with high definition dual-field optics, the CR2500 establishes a new benchmark in aggressive reading performance and ease of use in a mobile imaging reader.

1.2 - Unpacking

Remove the CR2500 from its packing and inspect it for damage. If the reader was damaged during shipping, please call Code at (801) 495-2200.

The standard CR2500 reader is shipped with a USB cable interface. The reader also features a 1950 mAH battery that must be installed in the reader at all times, unless a battery blank is being used.

Various accessories are available for the CR2500:
- 4 cable options (USB 6 ft., USB 12 ft., RS-232 (Serial) or PS/2)
- Class 1 Bluetooth radio with 100 meters (300 feet) operating range (shorter range option available)
- Ruggedized Cabled Handle
- Battery Handle (in two battery sizes)
- External Battery Charger
- CodeXML Bluetooth® Modems
- Power Supplies: US/Europe/SA/UK/Asia
- Reader Stand
- Lanyard Hook attachment option

> **NOTE:** Please keep your packing materials. The CR2500 is shipped in an approved shipping container and should be used if you ever need to return your equipment for servicing.

1.3 - Reader Battery Installation

Attaching and Detaching the Lithium Ion Battery

The CR2500 can be purchased with a 1950 mAH Lithium Ion battery. To install battery, make sure the battery is in the correct position (figure 1.1). Place the plastic tab of the battery into the reader (figure 1.2). Push the battery in and slide the locking mechanism down (figure 1.3)

Charging the Lithium Ion Battery

The battery automatically charges everytime a cable inteface is attached to the reader and the host is powered up.

Note: The RS-232 (Serial) interface power adapter must be plugged into a wall socket for the reader to charge.

If you power-up the CR2500 with a completely discharged battery it will take up to 10 minutes before the reader will become operational.

Figure 1.1	**Figure 1.2**	**Figure 1.3**

1.4 - Attaching Handles

BH1 or BH2 Battery Handle

1. Make sure the reader has no battery or battery blank installed.
2. Insert the tab on the back of the BH1 or BH2 Handle into the reader's recessed slot typically utilized to secure the battery in place on the reader (Figure 1.6).
3. The reader 'snaps' to the handle utilizing the battery compartment (Figure 1.7). The reader will 'quick release' from the handle to accommodate quick and easy battery charging.
4. Optionally, the reader can be further secured to the handle with two threaded screws on the underside of the reader and handle (Figure 1.8).
Figure 1.6	**Figure 1.7**	**Figure 1.8**

1.5 - Powering On/Off Reader

To power on the reader, press and hold either of the red trigger buttons for 3 seconds (Figure 1.9).

The reader will power down after 2 hours of non-use. To change the default settings, please see Section 4.6 - Reader Power Off Settings.

Figure 1.9

1.6 - Batch Operation

1.6.1 - Introduction

Batch data storage and data transfer are controlled by the resident JavaScript application on your CR2500 reader. Please consult the Code Viewer user manual for the application on your CR2500 for instructions on how to control data storage and transfer.

1.7 - Cabled Operation

1.7.1- Introduction

The CR2500 is a Multi-Interface Unit (MIU) and is available with USB (6 ft. or 12 ft.), RS-232 (Serial) and PS/2 cables. All of the cables are connected to the CR2500 with a 8-pin DIN connector (Figure 1.3)
Hand Held CR2500 - To install a cable directly to the CR2500, correctly line up the 8-pin DIN connector into the back end of the reader. The arrows on the connector should be facing down (Figure 1.10). When the reader and the cable connector are lined up, firmly push the cable into the reader. The cable has a locking mechanism that will firmly hold the cable in place (Figure 1.11). To deattach the cable from the reader, you must pinch the plastic on the 8-pin DIN and pull back to disengage the connector.

Figure 1.10

Figure 1.11

1.7 - Cabled Operation (continued)

CR2500 with Cabled Handle - If a handle was purchased for use with the CR2500, the 8-pin DIN connector is at the bottom of the handle (Figure 1.2). Insert the 8-pin connector and firmly push the cable into the handle. The cable has a locking mechanism that will firmly hold the cable in place. If using the H2 cabled handle, for additional stability, there is an optional cable attachement clip that can secure the cable to the handle with two threaded screws (Figure 1.13).

Figure 1.12

Figure 1.13

1.7.2 - CR2500 as a USB Keyboard

To connect the CR2500 to your host computer via USB interface:

1. Attach the USB cable to CR2500 (Figure 1.14).

2. There is no need to power of the computer (Figure 1.15) Connect the USB cable to a USB port on the computer (Figure 1.16).

3. Once properly connected, the CR2500 will power on and beep.

4. Scan the below code (M049_03) for USB Keyboard Mode:

USB Keyboard Factory Reset

M049_03

Save Settings

1.7.2.1 - Addional USB Communication Settings

USB Keyboard Mode - Data is sent from the Reader and interpreted by the host just as if a US keyboard was being used to enter data.

USB Downloader - This mode is used when downloading firmware.

USB Native Two Way Mode - This mode is utilized when there is a need for error-corrected communication between the CR2500 and an application through the USB port.

USB Virtual COM 1 Way Mode - This mode allows a USB-cabled CR2500 to function as a virtual COM port. To use the CR2500 in this mode, download the driver at **www.codecorp.com/downloads.html**.

USB HID POS (Terminal ID 131) - This mode allows a USB-cabled CR2500 to communicate as a USB HID POS (Terminal ID 131) device.

Scan the following codes to set the appropriate USB communication setting:

1.7.3 - PS/2 Cable Installation Guide

1. Power off the computer. If you disconnect the computer's keyboard while it is powered on, your computer will lock up.

2. Attach the the PS/2 cable to the CR2500.

3. If you have a cabled keyboard, detach the keyboard cable from the computer and connect that same connector to the female connection on the CR2500 PS/2 cable (Figure 1.17).

4. Now connect the male CR2500 PS/2 connector into the keyboard port on the computer (Figure 1.18).

5. Power on the computer. The CR2500 is powered by the PS/2 port and does not require a power supply.

6. Once properly connected, the CR2500 will power on and beep.

Figure 1.17

with all models of computers.

1.7.4 - RS-232 (Serial) Cable Installation Guide

1. Attach the RS-232 (Serial) Cable to the CR2500.

2. Connect the RS-232 (Serial) cable to a serial port on the computer (Figure 1.19). There is no need to power off the computer.

3. The RS-232 (Serial) interface has an optional 5V/1.5A power supply (Figure 1.20). If you have a power supply, plug the power supply adapter into the RS-232 (Serial) cable and then plug the power adapter into a wall socket (Figure 1.21).

Figure 1.19

Figure 1.20

Figure 1.21

4. Once properly connected, the CR2500 will power on and beep.

5. For RS-232 (Serial) mode scan M418_02 (below). If the power supply is not connected scan M074_02 (below).

6. Scan the Save Settings Code (M188_02).

1.8 - Bluetooth Radio Operation

1.8.1 - Introduction

The CR2500 features a Bluetooth® wireless radio. The radio allows for point-to-point wireless communication with other Bluetooth devices that support serial port protocol (SPP). If keyboard entry is necessary, Code XML Router will need to be installed. The following guide will give you general instructions on connecting your CR2500 to a desktop or laptop computer with a Bluetooth radio.

Connecting With A QuickConnect Code

The easiest way to connect to a Bluetooth device is to visit the Code website and create a *QuickConnect Code* that is specific to your device (Figure 1.22). This code will link your CR2500 directly to the desired Bluetooth device. To create a *QuickConnect Code,* you will need to know the Bluetooth address (often referred to as the BD_ADDR) of that device. You can usually find the 12-character Bluetooth address somewhere on the device near the device's serial number (see Figure 1.23).

Figure 1.22

Figure 1.23

If you purchased a CodeXML Bluetooth Modem or a Belkin® Bluetooth adapter from Code or from an authorized distributor, a QuickConnect Code was included. If you bought a Bluetooth adapter separately and wish to create a QuickConnect Code, please visit Code's web site at: **http://www.codecorp.com/bdaddr.php.**

Important Note: You will need to locate the Communications (COM) Port assigned to the Bluetooth serial port protocol. While installing the Bluetooth Configuration Manager Software that was included with your Bluetooth adapter, make sure to note the Communications (COM) Port number the software assigned for the adapter (e.g., COM 10). This is the COM Port through which the CR2500 will connect.

To connect your reader, use the following steps:
1. Power on the CR2500 reader by pressing one of the red buttons for one second to power on the reader.
2. Scan the Reset to RF Factory Defaults Code (M684_01).
3. Scan the Quick Connect Code you receieved or created from Code's website.
4. The CR2500 will automatically connect to the computer. By default, the CR2500 will beep once after it connects and beep four times in a row if it did not connect.
5. Scan the Save Settings Code (M188_02) if you want to save the wireless connection settings to the CR2500 so that the CR2500 will automatically try to connect wirelessly the next time it is powered on.

Example:

Reset to RF Factory Defaults   **QuickConnect**   **Save Settings**

1.8 - Bluetooth Radio Operation (continued)

Radio Range and Transferring Data

The CR2500 radio is a Class 1 device. If connected to another Class 1 device the reader has roughly a 100 meter (300 feet) line of sight operating range. If connecting to a Class 2 or Class 3 device, the operating range may drop to match the lower range. Once a reader is connected, a serial application must be opened (HyperTerminal) unless Code XML Router is installed.

When the CR2500 detects the radio is out of range, the CR2500 will store data on the reader's non-volatile memory. The reader will continue to try and send data until radio is back in range. Once the data is sent the data will be erased from the reader's memory. The reader will continue to try and connect until it has reached the programmable radio time out setting.

The CR2500 Bluetooth protocol allows for two (2) forms of communication:

1. **Standard Bluetooth Reliability Mode** (previously One Way Mode) - Communication between the reader and host, that does not require host acknowledgement. This mode is only recommended when connecting to a device well within its specified range or if connecting to a simple device (e.g., printer). There are two settings in this mode:

   • Max Range (Default) - Greater range but data reliability is lower
   • Max Reliability - Limits range but reliability is improved

   RF Standard Bluetooth Reliability Mode (Max Range)

   M127_01

   RF Standard Bluetooth Reliablility Mode (Max Reliability)

   M128_01

   Note: One Way Mode doesn't guarantee data integrity, and you may have data loss when operating in the fringes of radio range or in the presence of radio interference.

2. **Additional Bluetooth Reliability Mode** (previously Two Way Mode) - This mode requires the implementation of software at the application level.* The reader receives confirmation via packet protocol verification and is 100% reliable. Data will be automatically retransmitted if necessary.

   RF Additional Bluetooth Reliability Mode

   M129_02

   * Note: You will need either Code XML Router Software or a Code XML Bluetooth Modem on the PC side to use the Additional Bluetooth Reliability Mode.

   If you are using the CodeXML Bluetooth Modem, you must use RF Additional Bluetooth Reliability Mode.

1.8 - Bluetooth Radio Operation (continued)

Permanently Establishing a Connection

Scan the Save Settings Code at the bottom of the page to make the RF settings (including which device to connect to) permanent on the reader:

Disconnecting from the Device

You may force disconnection by reading the disconnect code below (The CR2500 may not appear disconnected in the slave Bluetooth connection manager for 10 – 15 seconds after the command is issued). The CR2500 will also disconnect after 90 seconds of inactivity (**Note:** You may change the radio sleep time out setting; however, it may reduce battery life).

Bluetooth Disconnect

M114_02

Reconnecting to the Device

If the device is saved in RF mode and has a save connection (save was performed while connected) it will automatically reconnect when:

1.   CR2500 is powered up
2.   CR2500 wakes from sleep mode
3.   CR2500 reads another code

1.8.2 - Bluetooth Radio Auto Connect

Auto Connect: After coming out of sleep mode or after powering up the CR2500 tries to auto connect with the last Bluetooth radio with which it was connected if the steps (previous) were followed (see Section 1.7.1 - Connecting with a Quick Connect Code). You may also re-connect by scanning a QuickConnect code.

Scan the following codes to enable or disable Auto Connect feature for the Bluetooth radio:

Bluetooth Radio
Auto Connect: On (Default)

M068_01

Bluetooth Radio
Auto Connect: Off

M067_01

> **Note:** Auto Connect should always be set to "On" if Auto Disconnect is set to "On". Otherwise the QuickConnect code would need to be re-scanned after every disconnect.

1.8.3 - Bluetooth Radio Auto Disconnect

Auto Disconnect: This feature is used when multiple CR2500 readers are connecting to the same Bluetooth Radio. By enabling Auto Disconnect the CR2500 radio disconnects after each data transmission, allowing other radios to connect.

Scan the following codes to enable or disable Auto Disconnect feature for the Bluetooth radio:

Bluetooth Radio
Auto Disconnect: On

M066_01

Bluetooth Radio
Auto Disconnect: Off (Default)

M065_01

M188_02
Save Settings

1.8.4 - Bluetooth Radio Time Out Settings

Scan the following codes to set the period of time before the Bluetooth Radio will go into sleep mode due to inactivity:

Note: Increasing the time before the reader will time out will decrease battery life.

90 Seconds (Default)

M125_01

5 Minutes

M121_01

10 Minutes

M122_01

15 Minutes

M123_01

30 Minutes

M124_01

1 Hour

M119_01

2 Hours

M120_01

1.8.5 - Bluetooth Radio Out of Range Notification Settings

Scan the following codes to enable a beep or vibrate notification when the radio goes out of range:

Bluetooth - Out of Range Beep: On

M583_01

Bluetooth - Out of Range Notify with Vibrate: On

M582_01

Bluetooth - Out of Range Vibrate & Beep: On

M587_01

Bluetooth - Out of Range Vibrate and/or Beep: Off (Default)

M581_01

Note: This feature may also be utilized to remind users they are carrying a reader and help prevent users from walking away with a reader Bluetooth radio.

1.8.6 - Auto Save Last Bluetooth Address

If the reader is saved in the proper RF communication mode, enabling this setting will allow the reader to automatically save the last device to which it was connected, removing the need to scan the save setting after scanning the QuickConnect code.

Enable Auto Save

M746_01

Disable Auto Save (Default)

M747_01

Save Settings

M188_02

1.8.7 - Configuration for Belkin Bluetooth Manager Software (Version 1.4.2.10)

In this version of the Belkin Bluetooth Manager software, you must disable the authentication feature to connect a CR2500. Follow the steps below:

1. Double click on the Bluetooth icon in the system tray. In the My Bluetooth Places Screen, select Advanced Configuration.

figure 1
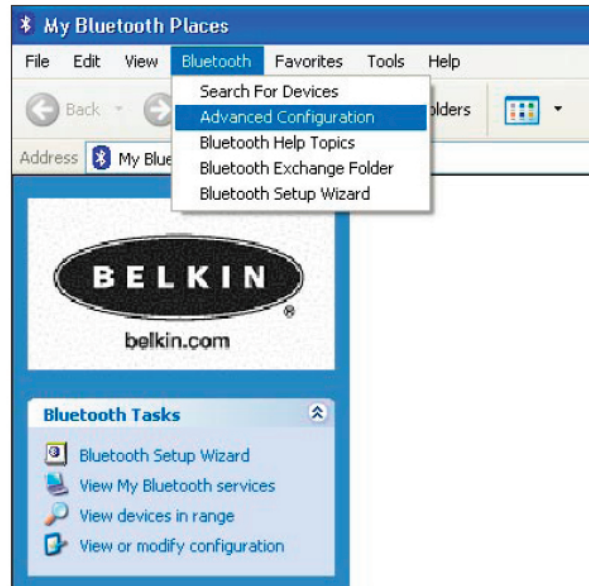

figure 2

2. Select the Local Services tab and double click on the Bluetooth Serial Port. Inder the General tab unselect the Secure Connection box. This disables the encryption feature and allows the CR2500 to connect to the Bluetooth adapter. Click Apply.
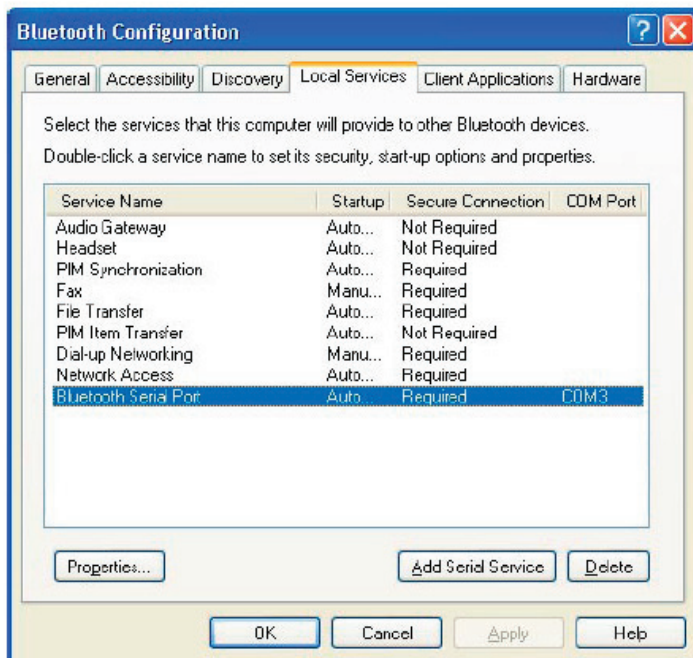

figure 3
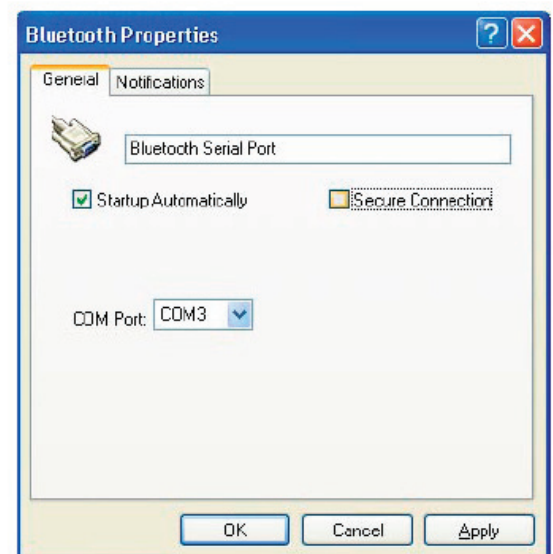

figure 4

1.8.7 - Configuration for Belkin Bluetooth Manager Software (Continued)

3.   Your local service Bluetooth Serial Port profile should now read "Not Required"
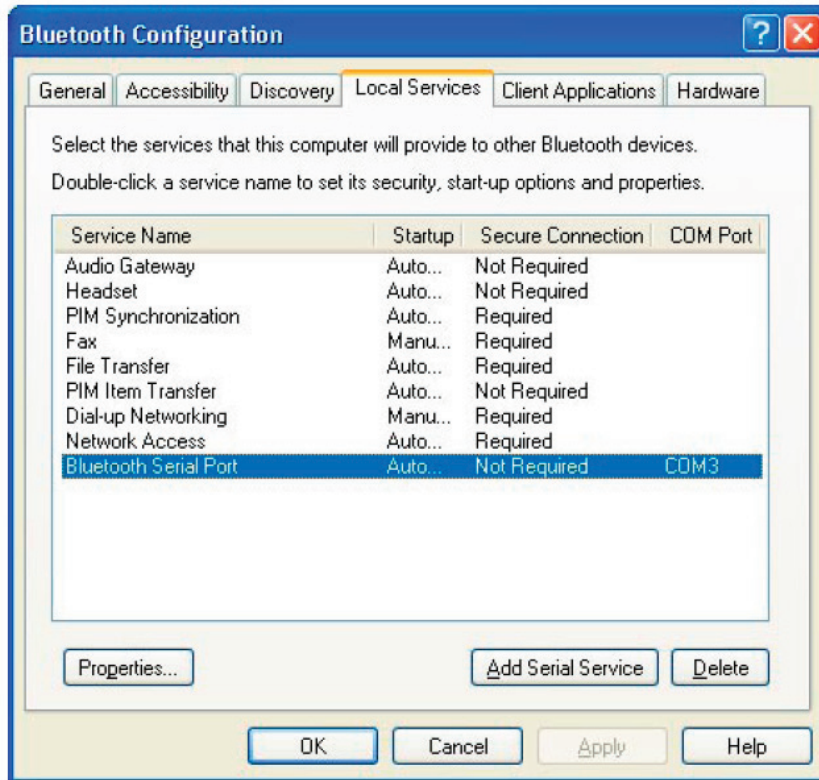

figure 5

4.   Open the "Accessibility" Tab and verify that "All Devices" are allowed to connect (this is the default setting). You should now be able to connect your CR2500.
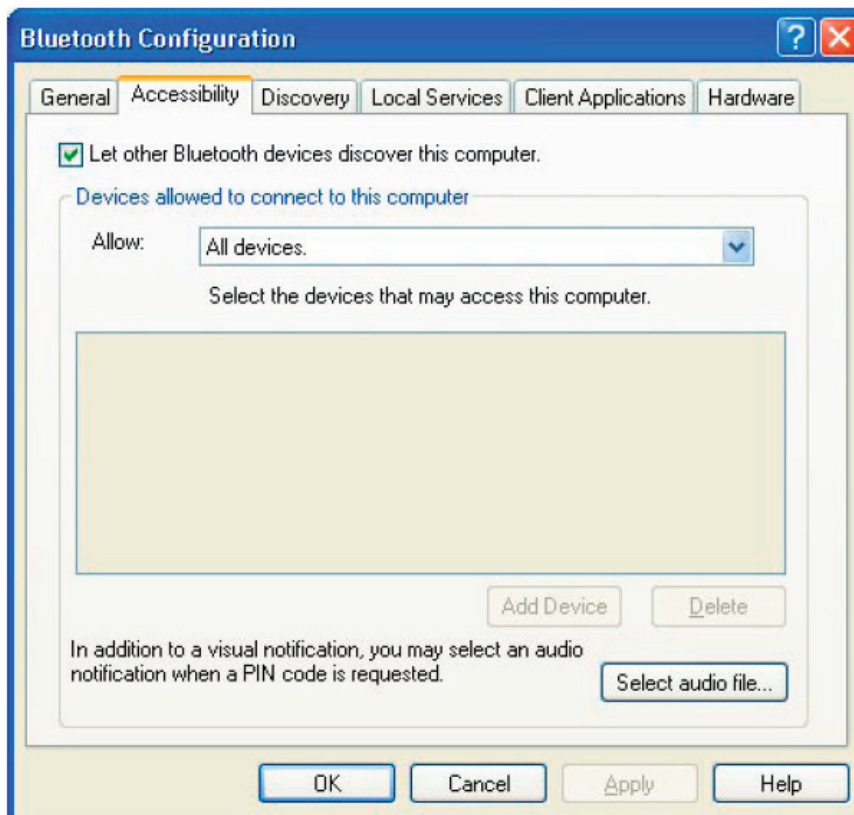

figure 6

1.8.8 - Configuration for Toshiba Bluetooth Stack Instructions

1.   Navigate to the Control Panel and Open the Bluetooth Local COM Port Icon.
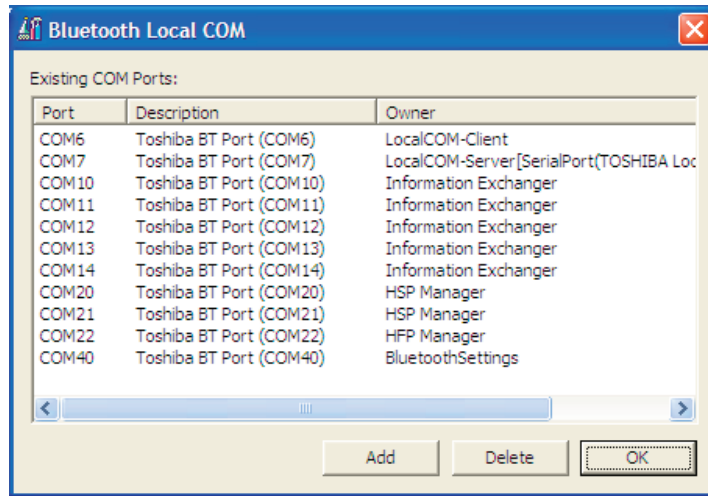

2.   Identify the Appropriate Com Port owned by the LocalCOM-Server[SerialPort(TOSHIBA LocalCOM)] Owner.

3.   Right Click on the Blutooth Manger Tray Icon and selection "Options", you can Identify your Device Address here, in this example 00:1B:FC:EF:3F:79

M188_02
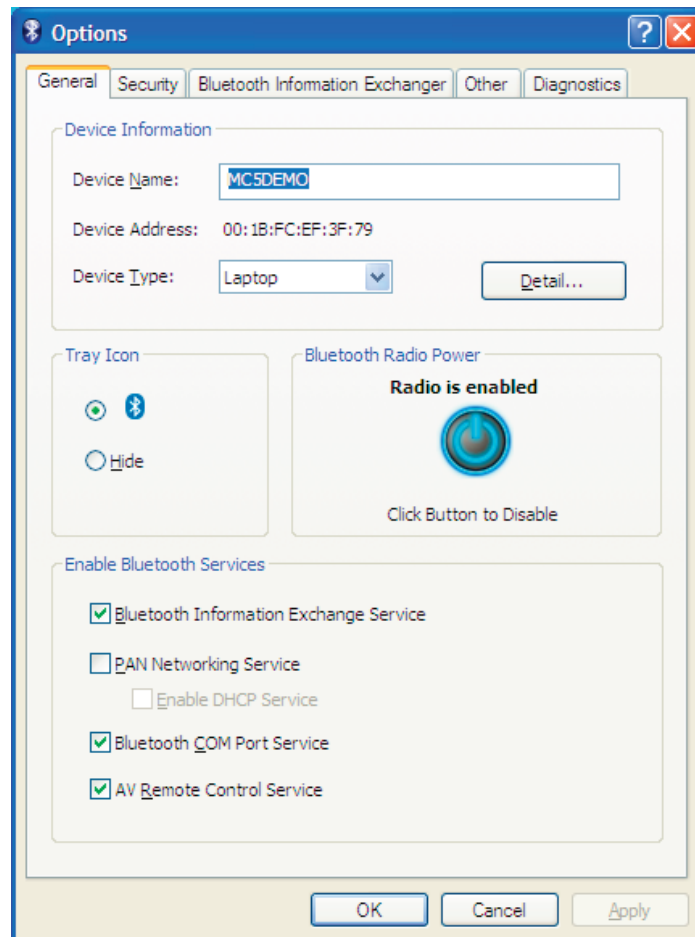

1.8.8 - Configuration for Toshiba Bluetooth Stack Instructions (continued)

3a.　　Go to **http://www.codecorp.com/bdaddr.php** and create a QuickConnect code using the address from step 3. Use the CodeXML Router/ 2-way applications section if CodeXML Router will be installed. Else create a QuickConnect Code using the section for Serial Applications.

4.　　Optional – To remove the Passkey dialogue when connecting, Select the Security TAB and Select Custom Level.
M188_02

4a.   Uncheck the settings under the Security Setting of Serial Port (SPP).
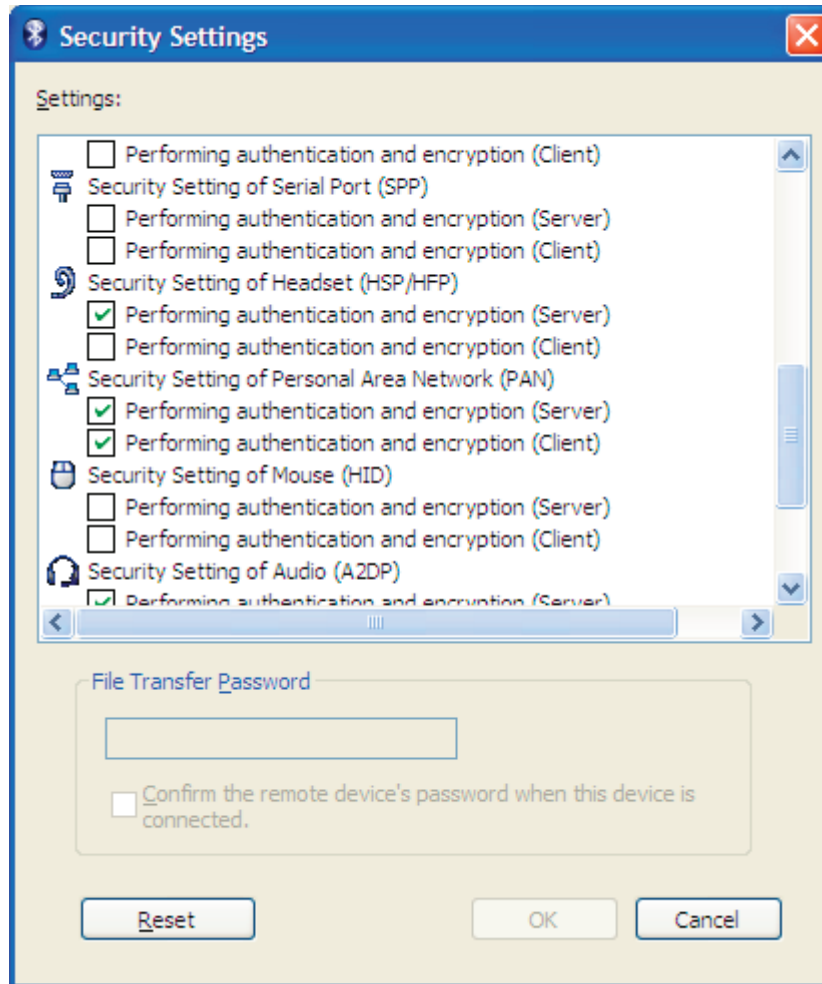

5.   Install the Code XML Router Software to the Device on the Appropriate COM Port. Reboot the PC and then scan your QuickConnect code to connect. Please note that the Toshiba Stack does not allow a device to connect until the Com Port is opened. CodeXML Router must be installed or the serial application must be started before the QuickConnect Code is read.

6.   Scan the QuickConnect Code generated in step 3. If step 4 was not done, Windows will prompt for a Passkey. The default Passkey is "12345678".

1.8.9 - Configuration for Microsoft Bluetooth Stack Instructions

1.   Right click on the Microsoft Bluetooth Stack system tray icon, select "Open Bluetooth Settings".

2.   Go to the "Hardware" tab and select the "Generic Bluetooth Radio" and then click "Properties". Next select the "Advanced" tab. Note the Address. For the example show below it is 00:17:9a:2b:69:bb.
1.8.9 - Configuration for Microsoft Bluetooth Stack Instructions (continued)

2a.   Go to **http://www.codecorp.com/bdaddr.php** and create a QuickConnect code using the address from step 2. Use the CodeXML Router/ 2-way applications section if CodeXML Router will be installed, otherwise create a QuickConnect Code using the section for Serial Applications.

3.   Under "COM Ports" tab, select "Add". In Add COM Port dialog box, select Incoming, click OK. Windows Installs driver and create a Bluetooth COM Port. Note the COM port number.
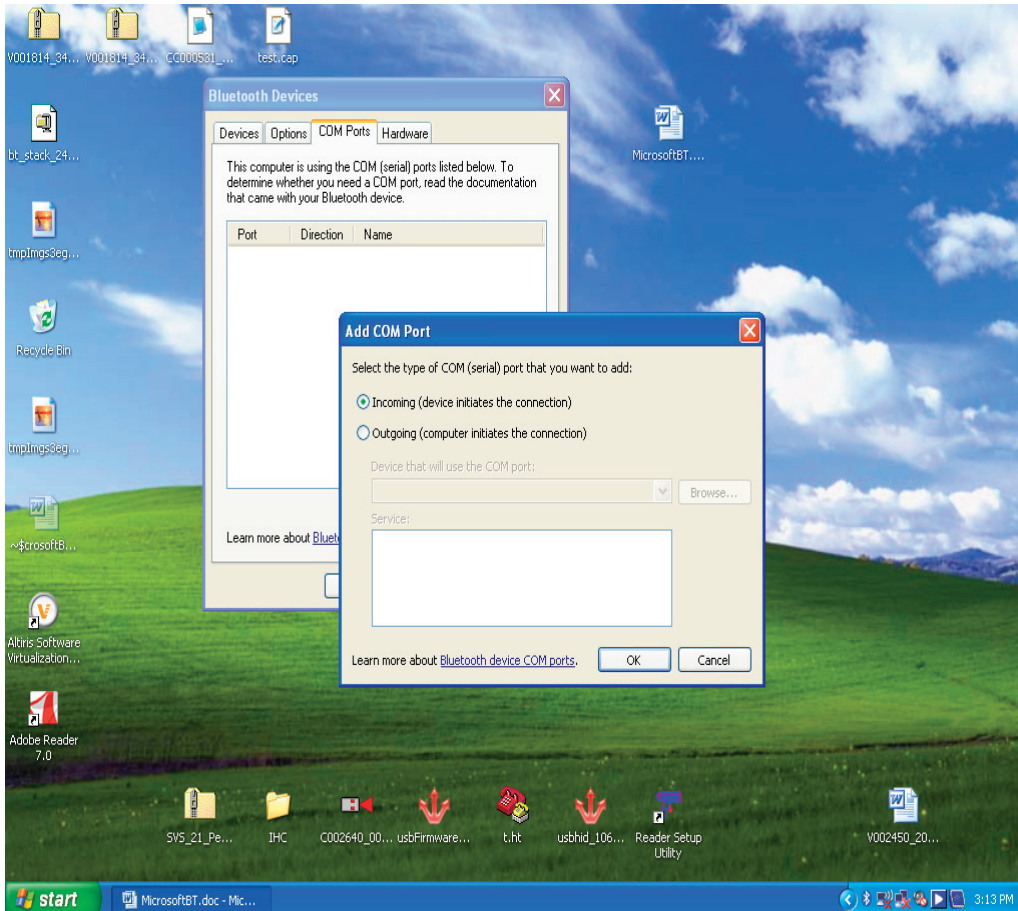

4.   Install the Code XML Router Software to the Device on the Appropriate COM Port. Reboot the PC and then scan your QuickConnect code to connect. Please note that the Window Stack does not allow a device to connect until the Com Port is opened. CodeXML Router must be installed or the serial application must be started before the QuickConnect Code is read.

5.   Scan the QuickConnect Code generated in step 3. Windows will prompt for a Passkey. The default Passkey is "12345678".

Save Settings

M188_02

1.8.10 - Installing CodeXML Router Bluetooth Edition for Windows

1. Insert the Code Router Bluetooth Edition for Windows CD into your PC's CD drive. The CD will automatically begin the installation process. When you get to the screen pictured below, please enter the CD Serial # Key found on the card included in the CD case.
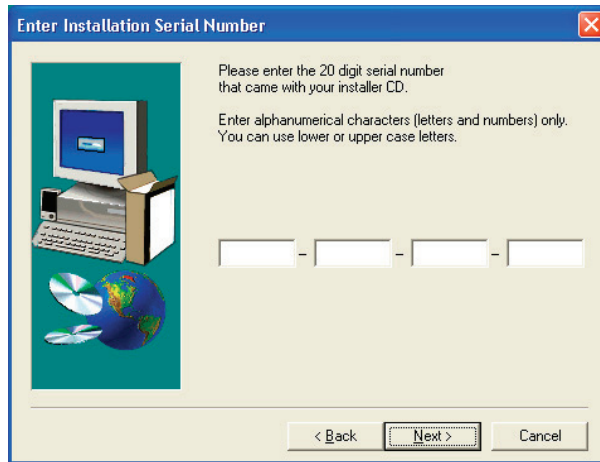

2. When you get to the screen pictured below, please choose from the appropriate settings. For a description of each setting, please see Chapter 3. **If connecting via Bluetooth radio, you will need to know the Virtual COM port number your Bluetooth software has assigned (see Frequently Asked Questions).** If you wish to enable the AutoDownload feature please check the appropriate box in the next screen. Finish the installation process and restart your computer.
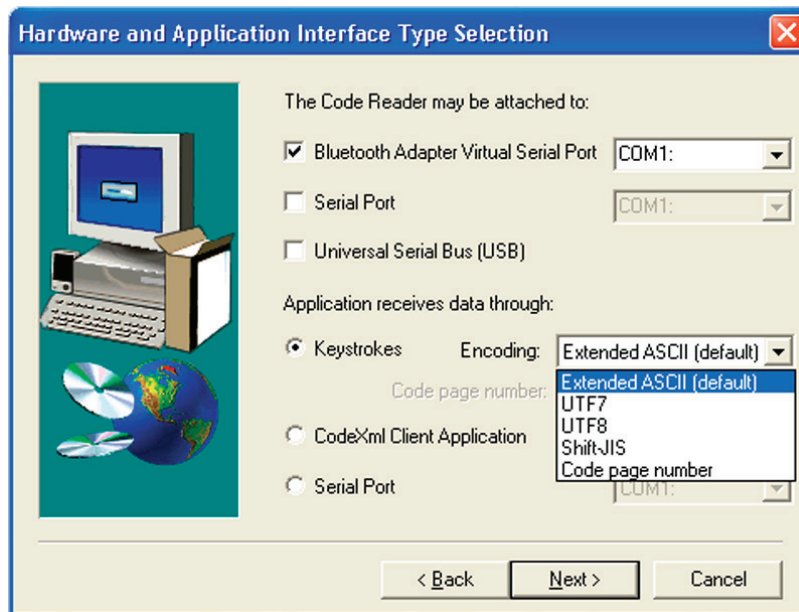

3. After restarting your computer, you will see a blue "arrows" icon in the system tray of your computer. CodeXML Router was successfully installed.

1.9 - Targeting and Reading Techniques

The CR2500 utilizes digital camera technology to take a picture of a symbol. Once an image is captured, the CR2500 utilizes advanced decoding algorithms to extract data from the captured image.

The CR2500 is available as a palm-held reader or users may purchase a handle (available in various types).

The palm held reader features left and right triggers. These triggers may be programmed to perform various features. The reader is shipped with the left trigger and right trigger functioning as a decode symbol command.

Each handle has a trigger on the grip. The two triggers on the top of the reader also work when the handle is attached Figure 1.24).

Figure 1.24

To read a bar code with the CR2500:

1. The CR2500 features omnidirectional decoding. Center the symbol in any orientation within the targeting line pattern (figure 1.25).
Figure 1.25

   Note: The CR2500 can read a bar code that is not centered or aligned; however, the CR2500 performs best when a code is aligned. If two (2) bar codes are within the imagers decode zone, the CR2500 will decode the symbol closest to the center of the targeting line.

2. The CR2500 was developed to decode both very small 2-dimensional symbols and larger 1-dimensional symbols. The reader has an innovative dual field decode zone. The CR2500 **DECODES ONLY THE WIDE FIELD BY DEFAULT**. By default, the reader will focus on wide field for larger codes (optimal focal point 3.3 inches). The reader can be programmed to focus on high density for smaller codes (optimal focal point is 3.3 inches).

3. Hold the CR2500 still - **DO NOT SWIPE OR MOVE THE READER.** Press the trigger until the CR2500 beeps, indicating the code has been successfully decoded.

4. The reader may be optimized to your specific environment by scanning codes in Chapter 2.

1.10 - Imager Field Selection and Resolution

The CR2500's dual field optical system may be modified based on your scanning environment.

The 1.3 Million Pixel imager is divided into wide field and high density decode zones. In each zone the resolution is 1024 x 640 pixels (see Figure 1.26).

If only the high density field is used (small symbols), the wide field image can be ignored. If only the wide field is used (large symbols), the high density field can be ignored.   Further optimization may be obtained by "windowing" the field to a smaller area. **BY DEFAULT, THE CR2500 DECODES ONLY THE WIDE FIELD.**

SXGA Imaging Area

Figure 1.26

1.11 - Decode Zone
Figure 1.27

Chapter 2 - Optimization and Trigger Programming

M188_02

2.1 - Introduction

By defining if you are scanning large, small, high denisty or low density types of symbology(s), the CR2500 has options that will maximize decoding speed.

The chart below shows options that will improve performance based on parameters listed in each box.

SXGA

Both Fields	**SB** High Density Codes Standard Density Codes Small to Large Codes
High Density Field	**SH** High Density Codes Small Size 2D
Wide Field	**SW** Standard Density Codes Medium to Large Codes

The CR2500 is easily customizable; each trigger can be independently programmed for different behavior.

High Density Field: The High Density Field can decode small bar codes. It has an optimal focal point of 3.3" (83.82 mm) away from the lens of the reader. See Figure 1.27 for optimal read distances.

Wide Field: The Wide Field can decode standard size bar codes. It has an optimal focal point of 3.3" (83.82 mm) away from the lens of the reader.

The following tables provide readable codes to program all or individual triggers to perform within different parameters. See Figure 1.28 for optimal read distances. The following tables provide the code to program all or individual triggers to perform with different parameters.

2.2 - Global Trigger Optimization Matrix

SXGA

Both Fields	M613_03

3.10 - GoCode Symbology

GoCode is a miniature, two-dimensional (2-D) symbol. Developed to fit within a line of text, GoCode features a multi-dimensional, adaptable matrix pattern that may be reproduced on virtually any surface. GoCode is a private symbology and may be utilized by purchasing a runtime license through Code. GoCode has many significant advantages over all common linear barcodes and 2-D symbols. Please contact Code for more information on the benefits of utilizing a private symbology.

Vibrate On / Beep Off

M109_01

Vibrate Off / Beep On

M108_01

Scan the following codes to set your reader's volume:

Beep Off

M110_01

Beep Low

M111_01

Beep High (Default)

M112_01

4.2 - Code Readability Index

The Readability Index provides a measurement of a specific symbol's ease or difficulty to be decoded by the CR2500. The Readability Index is specific to the CR2500, and should not be confused with a verification quality measurement.

The Readability Index is a blend of information obtained from the internal operations of the decoding algorithm pertaining to contrast, symbology construct, error detection, forward error correction (if applicable), and other symbology-specific characteristics.

The Readability Index is a score on a scale of 01 (very poor) to 100 (very readable). Due to differences based on motion, skew, reflection, focus, and ambient lighting, the Readability Index on the same symbol may vary somewhat from read to read. However, a poor contrast or damaged symbol will score lower than a high contrast undamaged symbol. The Readability Index can be used as a quick check on the reliability of label generation or marking systems. When used in conjunction with the CR2500 stand (or fixed mount positioning) which fixes the distance from the reader to the symbol, and constant ambient light, the Readability Index provides a symbol quality assurance tool and check point for feedback to an overall label or marking quality control system.

The Readability Index is enabled by first reading a CodeXML rule into the permanent CR2500 Memory:

Code Readability Index Rule:
M061_02

Readability Index Output Enable:

M062_02

Readability Index Output Disable:

M063_02

Each time a data symbol is read, the index will be output, followed by a comma, (,) followed by the decoded data. The reader will store the rule and reset, but will not output the Readability Index until the Readability Index Output Enable code is read. The Reader will continue to output the Readability Index upon every read until disabled, either by reset or by reading the Readability Index Output Disable code.

Save Settings

M188_02

4.3 - Backlight Intensity Settings

Scan the following codes to set the intensity of the CR2500's backlight with High being the brightest and Low being the dimmest:

Low

M678_03

Med - Default

M679_03

High

M680_03

4.4 - Backlight Timeout Settings

Scan the following codes to set the backlight settings:

Backlight Off

M686_05

3 seconds (Default)

M681_03

6 seconds

M682_03

10 seconds

M683_03

4.5 - Targeting Settings

Scan the following codes to turn targeting on/off:

On (Default)

M055_01

Off

M054_01

4.6 - Reader Power Off Settings

Scan the following codes to set the amount of time before a reader powers off:

1 Hour

M691_02

2 Hours - Default

M688_02

4 Hours

M689_02

Save Settings

M188_02

4.7 - Reader ID and Firmware Version

To find out the Reader ID and firmware version, open a text editor program (i.e., Notepad, Microsoft Word, etc.) and read the following code:

Reader ID and Firmware

M153_01

You will see a text string indicating your firmware version and CR2500 ID number (see below):

Xap/iVVVVWWWWXXXXSSSSSSSSSSPXX-XX+XXX

Xap/i - Code Internal ID (not applicable)

VVVV is the application firmware version number

WWWW is the bootloader firmware version number

XXXX is the radio firmware version number

SSSSSSSSSS Reader's serial number (ten digits)

P is "A" if running firmware is the application, "B" if BootLoader

XXX-XX+XX - Internal ID (not applicable)

Example: Xap/i3000300006040010002363A06D-SD+SQ

Note: Code will periodically release new firmware for CR2500 readers. For information on latest firmware versions, call Code at (801) 495-2200. To upgrade firmware, please visit our website at **http://www.codecorp.com/codesupport/html** and follow instructions provided.

4.8 - Reader Settings Lock

To lock or unlock the current settings on your reader please scan the codes below:

Reader Settings Locked

M429_01

Reader Settings Unlocked

M428_01

> **NOTE:** Prefix and Suffix programming codes, memory transfer and delete commands, "Clear All CodeXML Rules" and "Suffix -Erase/None" commands are not locked by this feature.

4.9 - Lock-out Link Mode

This mode can be used to establish a permanent connection between the reader and a CodeXML modem. Prepare the reader to communicate in 'RF Comm Mode' by scanning the QuickConnect code on the paired modem to which you wish to establish a permanent link. Listen for the single beep to verify the connection acknowledgement. Scan the Lockout Link Mode code (see below). Set appropriate timeout settings, if applicable (see Section 1.4.4).

To reassign a permanent connection to a different reader, scan the unlock link code. Using the 'new' reader' follow the directions outlined in the previous paragraph.

Lockout Link Mode

M188_02

Chapter 5 - Advanced Decode Performance

5.1 - Set Targeting Zone Tolerances

The targeting tolerance is the zone around the green LED which is eligible for decoding. The values of each of the following codes are the percent tolerance based on the size of the barcode. As the targeting tolerance becomes smaller the targeting green LED must be more centered in the symbol being read. Conversely, as the targeting tolerance gets larger there is less precision needed with the green LED. If there is more than one decodable code in the field of the, the symbol closest to the targeting green LED will be decoded.

Too far from code.

Too close to code.

Optimal distance from code is 3.3" (85mm).

**1600 (Default)
Least Accurate**

M196_01

5.2 - Windowing

If only one size of bar code is being scanned in an application, the CR2500 can be optimized to reduce processing time by adjusting the viewing area within the field of view of the image.

By reducing the vertical window value of the imager to 200 pixels, 1-D codes are processed more quickly. Because only a horizontal strip of a 1-D code is needed to be decoded, using a narrow strip of the imager is all that is needed. The area above and below the 200 pixels, which is always in the center of the imager, is ignored. This approach reduces the number of pixels that must be processed.

Windowing can improve the processing time of 1D and 2D codes.

You may negatively impact reader performance if the window size is too small. If it is necessary to have the reader farther away than normal to read the code, the window may be too small.

Reading other types of codes, especially large codes, may be difficult while using this setting.

Medium Code Windowing

Small Code Windowing
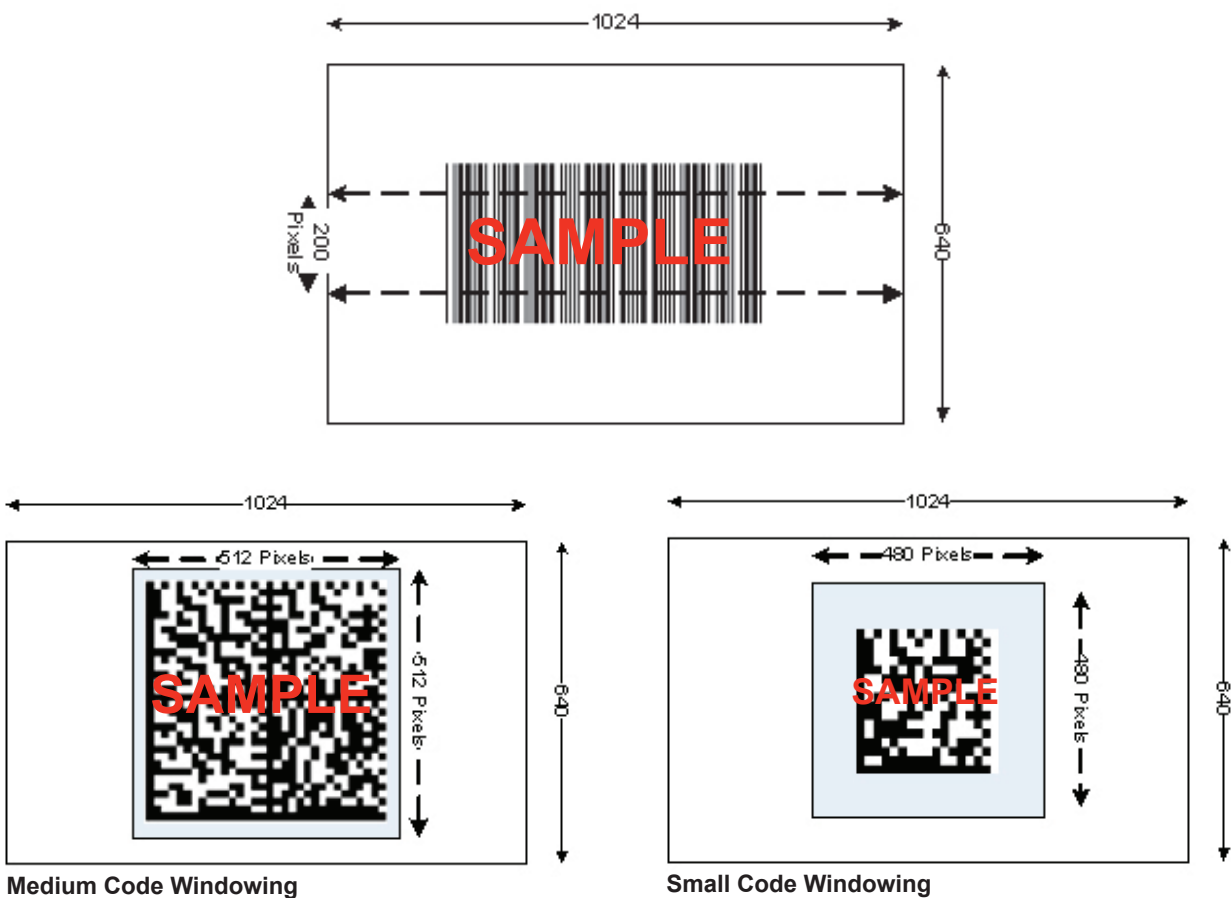

5.2 - Windowing (continued)

Users may optimize the CR2500 decode zone if their application only requires one bar code format. If the size and density of the bar codes to be scanned are consistent, please select the setting below that best describes your environment.

1-Dimensional Codes ONLY (1024 X 200 pixels)

M209_01

Caution: It may be more difficult to read other codes while in this setting. You must have the

reader farther away than normal.

Small 2-Dimensional Codes (480 x 480 pixels)

M210_01

Medium 2-Dimensional Codes (512 x 512 pixels)

M211_01

Large 2-Dimensional Codes (640 x 640 pixels)

M212_01

Reset to Default Setting (1024 X 640 pixels)

M213_01

5.3 - Mirror Decoding

Scan the following codes to enable/disable the mirroring feature:

On

M182_01

Off   (Default)

M181_02

Note: The Mirroring feature allows the CR2500 to read codes as they are seen through a mirror (inversed 180°). If the Mirroring feature is enabled, non-mirrored reading ability will be disabled.

5.4 - Anti-Glare

Anti-glare technology improves performance on highly reflective surfaces. The CR2500 will detect when the glare from the illumination LEDs is preventing the reader from being able to decode the bar code. Once glare is detected the reader will

attempt to control the illumination LEDs to remove or reduce the glare thereby improving performance.

Enable Anti-glare (default)

M753_01

Disable Anti-glare

M754_01

Chapter 6 - Adding a Prefix or Suffix and Reader Text Commands

M188_02

6.1 - Prefix Settings

If you scan the following codes, you will lose any unsaved settings. Make sure to save settings on your reader before scanning the prefix codes. If you scan more than one prefix you will receive each scanned prefix in your scanned data; (i.e., if you scan comma prefix twice, you will get two comma prefixes). Scan the following codes to set appropriate prefix:

Prefix - Comma

M159_02

Prefix - Space

M164_02

Prefix - Tab (Keyboard Mode)

M166_01

Prefix - Tab (Serial)

M218_02

Prefix - Erase

M404_01

Prefix - Carriage Return Line Feed (Serial)

M214_02

Note: If you require a special configuration, please contact Code at (801) 495-2200 or email appeng@codecorp.com.

6.2 - Suffix Settings

If you scan the following codes, you may lose your current settings. Make sure to save settings on your reader before scanning the Suffix codes. If you scan more than one suffix you will receive each scanned suffix in your scanned data; (i.e., if you scan comma suffix twice, you will get two comma suffixes). Scan the following codes to set appropriate suffix:

Suffix - Carriage Return (Serial)

M168_04

Suffix - Comma

M160_04

Suffix - Line Feed (Serial)

M169_04

Suffix - Carriage Return Line Feed (Serial)

7.2 - General Safety Information

Repairs and Adjustments - Only those individuals authorized by Code should attempt to make repairs or adjustments to CR2500 equipment. If the reader casing is opened the warranty is voided.

Power Supply - Use only the power supply provided for use with each specific reader when operating Code equipment.

Accessories - Only those accessories approved by Code (see page 2) should be utilized with Code equipment.
Non-compliance with any of the above may result in:

- Injury to individuals handling the equipment;
- Damage to the equipment; and
- Voiding of the maintenance contract.

Lithium Ion Battery - Warning: Charge the battery with Code cables ONLY. Do not open battery, dispose of in fire, or short circuit - it may ignite, explode, leak, or get hot causing personal injury.

Save Settings

M188_02

7.3 - Warranty

Code Corporation's CR2500 carries a three year limited warranty as described herein.

Customers may purchase a one or two year extension to this warranty. Please contact a Code representative for more information.

Limited Warranty

Code manufactures its hardware products in accordance with industry-standard practices. Code warrants its products will be free from defects in materials and workmanship, provided that the products are used under normal operating condition intended by the Manufacturer. This warranty is provided to the original owner only and is not transferable to any third party. This warranty is subject to any and all accompanying disclaimers, limitations and other terms of this section.

Terms of Warranty

CR2500 readers carry a warranty of three years. Other products with serial numbers, such as but not limited to, radios, CodeXML modems, battery chargers, stands and power supplies are warranted for three years from date of shipment. Batteries and battery handles carry a two year warranty, or until battery capacity after recharge is less than sixty percent of new, whichever is shortest. Non-serialized items, such as but not limited to handles and cables, carry a 90-day limited warranty.

Exclusions

No warranty herein contained or set out shall apply to any product (i) which has been repaired, altered or tampered with unless done or approved by Code, (ii) which has not been maintained in accordance with any operating or handling instructions supplied by Code, (iii) which has been subjected to unusual physical or electrical stress, immersion in fluids, puncture, crushing, misuse, abuse, power shortage, improper power supply such as incorrect voltage or wrong polarity, negligence or accident, or (iv) which has been used other than in accordance with the product operating and handling instructions. Preventive maintenance is the responsibility of the customer and is not covered under this warranty.

Warranty Coverage and Procedure

During the warranty period, Code will repair or replace defective products returned to Code's service center in the US. For worldwide warranty service call Code Warranty Support at 1-801-495-2200 or email support@codecorp.com.

If warranty service is required, Code will issue a Return Material Authorization Number. Products must be shipped in the original or comparable packaging, with shipping and insurance charges prepaid. Code will ship the repaired or replacement product freight and insurance prepaid in North America. Shipments from the US or other locations will be made F.O.B. Code's manufacturing plant. Code will use new or refurbished parts at its discretion and will own all parts removed from repaired products. Customer will pay for any pre-shipped replacement product in case it does not return the replaced product to Code within 7 days of receipt of the replacement product. The process for return and customer's charges will be in accordance with Code's Exchange Policy in effect at the time of the exchange.

Customer accepts full responsibility for its software and data including the appropriate backup thereof. Repair or replacement of a product during warranty will not extend the original warranty term. Code's Customer Service organization offers an array of service plans, such as on-site, depot, or phone support, that can be implemented to meet customer's special operational requirements and are available at a substantial discount during warranty period.

7.3 - Warranty (continued)

General

EXCEPT FOR THE WARRANTIES STATED ABOVE, CODE DISCLAIMS ALL WARRANTIES, EXPRESS OR IMPLIED, ON PRODUCTS FURNISHED HEREUNDER, INCLUDING WITHOUT LIMITATION IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE AND NON-INFRINGEMENT. The stated express warranties are in lieu of all obligations or liabilities on part of Code for damages, including without limitation, special, indirect, or consequential damages arising out of or in connection with the use or performance of the product. Seller's liability for damages to buyer or others (regardless of the form of action, whether by contract, warranty, tort, malpractice, and/or otherwise) resulting from the use of any product, shall in no way exceed the purchase price of said product. In no event shall Code be liable for any consequential, special, indirect, incidental or punitive damages, or for any loss of profits, revenue or data, even if Code has been advised of the possibility thereof.

7.6 - CR2500 Maintenance

The CR2500 device operates efficiently and reliably and needs only a minimum of maintenance to operate.
A few tips are given below for maintenance suggestions.

Cleaning the CR2500 Window
The CR2500 window should be clean to allow the best performance of the device. The window is the clear plastic piece inside the head of the reader. Do not touch the window. Your CR2500 uses CMOS technology that is much like a digital camera. A dirty window may stop the CR2500 from reading bar codes.

If the window becomes dirty, clean it with a soft, non-abrasive cloth or a facial tissue (no lotions or additives) that has been moistened with water. A mild detergent may be used to clean the window, but the window should be wiped with a water moistened cloth or tissue after using the detergent.

The CR2500 display screen and housing may be cleaned in the same way.

For applications that require cleaning with disinfectant, please use products with the following ingredients:
1) Isopropyl Alcohol
2) Ethyl Alcohol (Denatured Grade)

Code does not recommend using bleach.

Technical Support and Returns
For returns or technical support call Code Technical Support at (801) 495-2200. For all returns Code will issue an RMA number which must be placed on the packing slip when the reader is returned.
Visit **http://www.codecorp.com/codesupport.html** for more information.
