Real-time inventories at your fingertips

When fired up, our RADEA.IO RFID software immediately sees any RFID labelled item within range of our RFID readers.

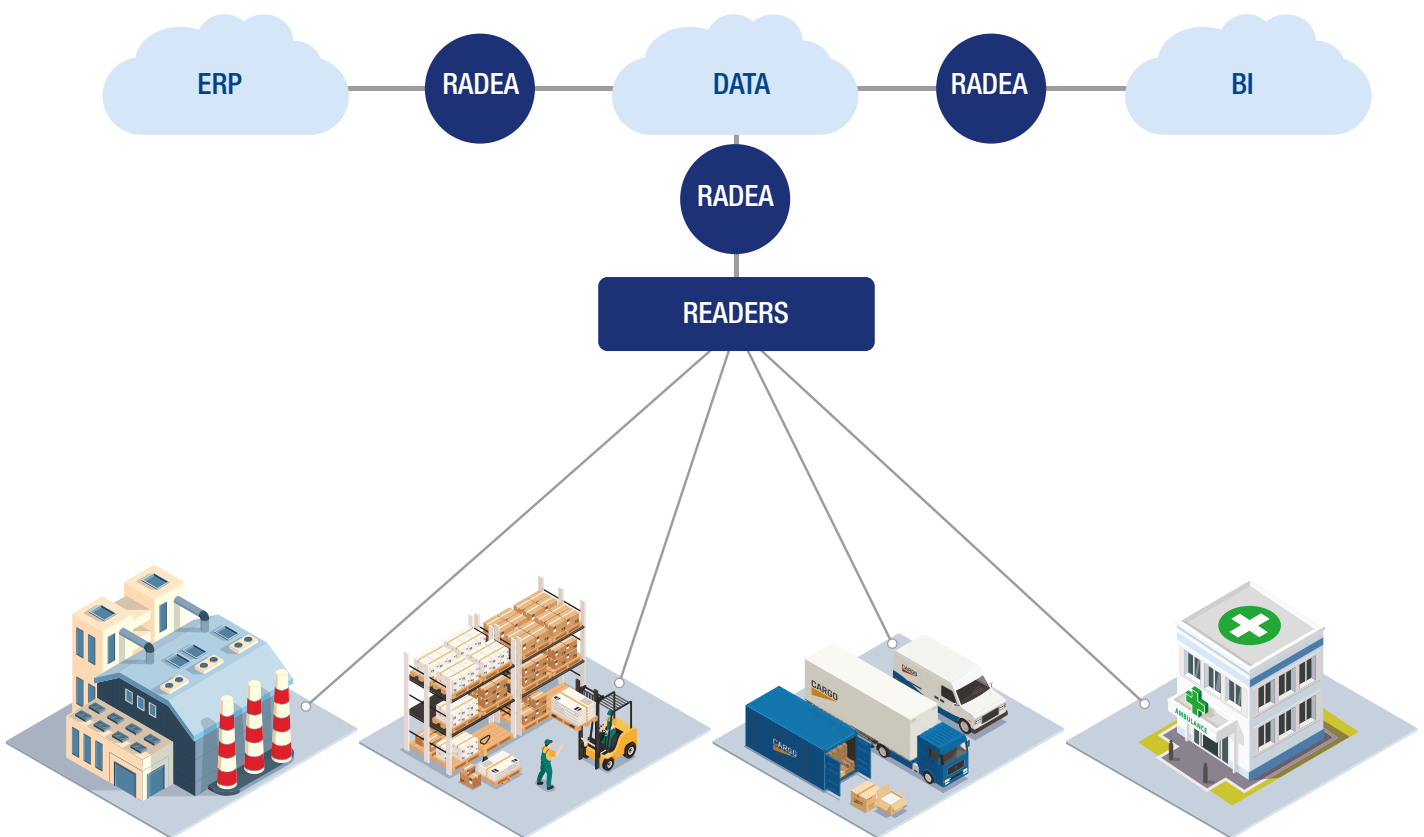

RADEA.IO is an affordable and highly customisable automated inventory and item tracking software. It enables you to quickly and easily create asset, product and item categories. To add locations. To give them any name that optimally fits your processes.

Within a day, you will be able to watch your items and inventories in real-time overviews that update every second.

Standalone or integrated solution

RADEA.IO is standard available as a cloud application that does not require any installation. The software can however be installed on proprietary ICT-systems and networks.

RADEA.IO also offers an API-key to integrate it into existing systems to facilitate additional processes, including auditing, purchasing, distribution and logistics.

Article No.	Description
322511	RADEA.IO cloud hosted by Brady, 1 Year
322517	RADEA.IO training for users and administrators
322518	Radea.IO server for on-premises deployment
322519	RADEA.IO additional set of 10 locations 1 Year
