Insert available in white and yellow.

Print a single up to hundreds of inserts with Brady benchtop and mobile printers.

More details about DuraSleeve can be found on the Brady website: www.bradyeurope.com/DuraSleeve

▶ DuraSleeve inserts can be updated quickly by sliding in a new insert that will push out the obsolete insert. This flexibility makes DuraSleeve highly efficient to identify electrical panels that are frequently updated and repurposed. With DuraSleeve there is no need to invest time to remove labels or sleeves that are no longer valid. On top of this, maintenance professionals can slide the DuraSleeve carrier along the cable it was applied to, which can offer better visibility and manoeuvrability when servicing or updating electrical panels.

▶ The Rigid DuraSleeve carrier can be slid over a cable before termination. Its insert can easily be printed with a professional label printer, and is practical to replace and reflect updates in the field.
