Own your safety program

SmartCheck™ Safety Software & Management System

End-to-end performance and support
from the field •••••••••••→ to the front office

You do a lot in a day to keep your workers safe and your operations running. You uncover, find, troubleshoot, fix, create, repair, resolve, refine and manage … the bottom line: you adapt to any situation using a vast assortment of solutions at your disposal. Having the *right* tool for the job is important, but wouldn't it also be nice to have **one** tool for the job?

Say hello to the first all-in-one solution built to take you from identification to resolution as fast and effectively as possible. Automate tedious tasks, prevent costly errors, protect your workers and your business, and analyze the wealth of data under your roof.

Safety Management Software

Expert Services, Onboarding & Support

Embedded Printing Capabilities

Product Recommendations & Ordering

Digitize and automate manual processes

Best-in-class safety management software, compliance tools and reporting at your fingertips

Managing safety workflows, processes and data across workers, equipment and facilities can be daunting. Fully configurable SmartCheck™ safety software delivers value where and how you need it. Our safety experts will work with you to evaluate your program and select the modules designed to overcome your challenges.

SMARTCHECK™
SAFETY SOFTWARE & MANAGEMENT SYSTEM

Chemical Database

Track, store and update every chemical in your facility. Plus, take advantage of compliant labeling that's auto-populated by your stored data, such as GHS labels.

Select what you need

Lay the foundation for a strong safety culture through intuitive safety software modules.

Assessments

Streamline inspection and auditing workflows to ensure assets, equipment and areas are compliant and workers are protected.

Job Safety & Hazard Analysis

Create, evaluate and store all tasks, potential hazards, risks and controls in one centralized library for better transparency and faster recall.

Incidents & Hazards

Capture, track, investigate, report and resolve incidents, hazards and near misses to stay on top of risk assessment and OSHA reporting.

Bonus!

Assessments, Job Safety & Hazard Analysis, and Incidents & Hazards modules include the following features:

Dashboard – know exactly where you stand at a glance and drill down deeper by area

Reporting – get the data that matters so you can react faster to risks and prevent them from becoming future incidents

Or, select the Full Software Suite

If you're looking for the right solution, try the **whole** solution, which includes all modules.

Print and resolve at the point of need

Embedded printing and safety solutions at your command

A safety risk identified but unresolved is still a safety risk. But that would mean a separate workflow, right? Not with printing and ordering through the SmartCheck™ system. With right-on-site Brady printing capabilities and expert product recommendations, you can mobilize people and products fast to move from issue identification to resolution at the point of need.

Print and label

Audits and inspections often uncover the need for signs, labels and tags. And with embedded printing in the SmartCheck™ system, these to-dos just got done, thanks to the Brady BBP® 37 Multicolor & Cut Label Printer. Print on materials of all types and sizes using preconfigured templates that already meet safety standards. Not sure which to use? No problem. You can use what's recommended right in your system.

Supply and order

Find the solutions you need to fix the issues you find, from absorbents to floor tape to lockout tagout, with trusted products from the safety and facility identification leader.

Troubleshoot and optimize

Built right into your BBP® 37 printer, Brady Workstation software gives you predefined templates or customization options to print signs, labels, markers and lean visuals that fit your facility. And with LINK360® visual procedure software, you have the tool to manage up-to-date, sustainable lockout tagout, electrical safety and confined space programs.

Reduce administrative work, prevent costly errors, and protect workers and your business

Expert services, consultation and support

Get up and running fast

Setup, training and troubleshooting at your call (or email)

New program, new headaches implementing it, right? Not this time. Getting buy-in, learning a system and implementing takes time and resources that you may not have. But Brady does … and they're yours. Our safety experts are dedicated to helping your team set up and hit the ground running with:

▸ Workflow setup and data migration

▸ Inspection calendar setup

▸ Updates and customized question sets, labels and signs

▸ Helping scale solution to multiple sites

▸ Virtual or on-site training for new team members

Define success – we'll help you get there

Expert guidance and execution at your service

Safety is a journey, not a destination – which is why this isn't one and done. We're here for the life of your safety program. Brady Safety Services Team experts and field engineers can act as an extension of your team to help customize and continually refine a solution that meets your goals. Put us to the test. We promise we'll deliver.

▸ Lockout tagout services

▸ Electrical safety services

▸ Confined space services
