Absorbent Spill Kits
Accidents happen, so it’s better to be prepared.

Brady offers a complete selection of SPC spill kits in a variety of types and sizes to equip you with everything you need to clean up accidents when they happen. Available in universal, oil only, chemical and mixed application options, these spill kits help you to quickly and efficiently respond.

Many of our kits are available in the following types:

• Universal Kits: All-purpose absorbents for oil-based, water-based and chemical liquids
• Oil Only Kits: Water repellent absorbents for oil and petroleum-based liquids
• Chemical Kits: Absorbents for aggressive and hazardous liquids
• Re-Form™ Kits: Universal absorbents that are eco-friendly
• TAA Compliant Kits: Designed to comply with the Trade Agreements Act
• Mixed Application Kits: Ideal for indoor and outdoor applications. Kits contain both all-purpose universal absorbents and water-repellent oil only absorbents for petroleum and oil-based liquids

Spill Kits Increase Efficiency
Worker productivity can be improved dramatically by strategically placing spill kits or absorbent storage centers around the facility closer to areas of need. For both emergency spill clean-up and routine maintenance and safety, absorbents should be readily available to allow for quicker response.

BE PREPARED: Make sure you have spill kits on hand throughout your facility!

1. Risk Assessment
   Evaluate the type of material spilled and identify the source. If you are NOT familiar with the liquid and its chemical properties, vacate the area and contact proper authorities.

2. Protective Clothing
   Wear the appropriate protective gear for the situation. If the source or the material is not identifiable, assume the worst.

3. Containment
   Contain the liquid and seal drains.

4. Stop the Source
   Close valves, rotate punctured drums and plug leaks where it is possible and safe to do so.

5. Begin Clean Up
   Use SPC absorbents to clean-up spilled liquids.

6. Contact Authorities
   Report the spill to proper legal authorities in your community. Be sure to fill out all necessary reports in accordance with local laws.

7. Disposal of Used Material
   Absorbent materials take on the characteristics of whatever they absorb. Be sure to dispose of used absorbents and spilled liquids in accordance with local laws.

8. Decontaminate
   Clean all tools and reusable materials properly before reuse.

9. Restock Materials
   Replace absorbent materials and safety equipment used in any clean up operation.

10. Review Contingency Plans and Procedures!
