

Spill Procedure Guide

What To Do When A Spill Occurs

When a spill occurs, efficient and safe clean-up is critical. Here is a checklist to help make sure you, your employees and the environment are all protected.

PLEASE NOTE: The SPC Spill Kit is a stop-gap measure for minor spill clean-up. If a serious spill occurs, contact local authorities for direction and assistance. Due to the possible toxic and hazardous fluid absorbed, Brady does not recommend disposal procedures.

- Assess the Risk**
Evaluate the material spilled and identify the source. If you are NOT familiar with the liquid and its chemical properties, vacate the area and contact proper authorities.
- Protective Clothing**
Wear appropriate protective gear for the situation. If the source or the material is not identifiable, assume the worst.
- Contain the Spill**
Contain the liquid and seal drains.
- Stop the Source**
Close valves, rotate punctured drums and plug leaks where it is possible and safe to do so.
- Begin Clean Up**
Use Brady SPC absorbents to safely clean up spilled liquids.
- Contact Authorities**
Report the spill to proper legal authorities in your community. Be sure to fill out all necessary reports in accordance with local laws.
- Dispose of Used Material**
Absorbent materials take on the characteristics of whatever they absorb. Be sure to dispose of used absorbents and spilled liquids in accordance with local laws.
- Decontaminate**
Clean all tools and reusable materials properly before reuse.
- Restock Materials**
Replace absorbent materials and safety equipment used in any clean-up operation.
- Review Contingency Plans and Procedures!**
