

Non-adhesive rotating cable identification

Tubesleeve

Well-identified cables offer an immediate insight into how an installation works and how it is connected. The non-adhesive Tubesleeve enables cable identification that stays in place and can be rotated at the same time for fast updates and repairs with a reduced risk of human error.

Fast

- easily clip a Tubesleeve onto a cable with 1-4mm, 4-6mm, 6-8mm or 8-12mm diameter
- apply a self-adhesive wrap-around cable label on the Tubesleeve

Reliable

- Tubesleeve stays in place and can be rotated to bring the label print into view
- Brady wrap-around cable labels are reliable and tested in challenging conditions

Anywhere

- use a Brady portable label printer to easily design, serialise or barcode self-adhesive labels
- carry only a small bag of Tubesleeves and a portable printer with a consumable cartridge
